Result 1 (higher universe holder). [Topology foundations, module holder projection]
Let K be a type. Let *field* be a field structure on K. Let M be a module over K. Let $H = \text{module holder}(K, \mathit{field}, M)$. Then

$$H.\text{object} = M.$$

Result 2 (higher universe function). [Topology foundations, module identity application]
Let K be a type. Let *field* be a field structure on K. Let M be a module over K. Let $f = \text{id}$. Let $N = f(M)$. Then

$$N = M.$$

Result 3 (small proof field). [Topology foundations, impredicative proof field application]
Let K be a type. Let *field* be a field structure on K. Let M be a module over K. Let *law* be a function assigning to each $N : \text{Mod}_K$ evidence that $N = N$. Let $L = \text{module law}(K, \mathit{field}, \mathit{law})$. Let $h = L.\text{law}(M)$. Then

$$M = M.$$
