## Attribution from BibTeX

This statement imports its bibliography from a BibTeX file. Mathematical definitions come from the separately imported linear algebra module.

**Result 1 (similarity preserves eigenvectors).** [stewart2001, Theorem 1.10, page 9]
Let $n$ be a natural number. Let $A$ and $S$ be $n \times n$ matrices over $\mathbb{C}$. Let $x$ be a vector of length $n$ over $\mathbb{C}$. Let $\mu$ be a complex number. Assume $\det(S) \neq 0$ (`invertibility`). Assume $x \neq 0$ (`nonzero`). Assume $A\,x = \mu\,x$ (`eigenpair`). Let $y = S^{-1}\,x$. Then

$$y \neq 0 \text{ and } S^{-1}\,A\,S\,y = \mu\,y.$$

Adapted from the cited source. Scope: eigenvector part.
