Result 1 (addition with one). [Mathlib]
Let x be an element of $\mathbb{R}$. Then

$$x + (1 : \mathbb{R}) = (1 : \mathbb{R}) + x.$$

Result 2 (named numeral assumption). [Numeral study, identity]
Assume $0 \leq (001 : \mathbb{R})$ (`nonnegative((1: Real))`). Then

$$0 \leq (1 : \mathbb{R}).$$

LLM-assisted prototype examples (gpt-6, 2026-11-07). Explicit numeral annotations remain visible. See PROVENANCE.md.
