Result 1 (local carrier identity). [Type identity study, lexical type binding]
Let *Real* be a type. Let x be an element of *Real*. Then

$$x = x.$$

Isolated local type identity repair. LLM-assisted statement and proofs (gpt-6, 2026-11-07); see PROVENANCE.md. The name Real denotes a local type parameter in this statement. Main Clean still has the recorded translation bug.
