**Result 1 (arbitrary equality).** [Sequential scope, equality reflexivity]
Let $T$ be a type. Let $x$ be an element of $T$. Then

$$x = x.$$

**Result 2 (absolute value nonnegative).** [Sequential scope, Mathlib abs_nonneg]
Let $x$ be an element of $\mathbb{R}$. Then

$$|x| \geq 0.$$

LLM-assisted statements and proofs (gpt-6, 2026-11-07). See PROVENANCE.md. The first statement retains its local carrier despite a later global type of the same name.
