Result 1 (returned function application). [Postfix application, returned function]
Let n and m be natural numbers. Then

$$T_n(m) = n + m.$$

Result 2 (curried local application). [Postfix application, curried local]
Let f be a function from $\mathbb{N}$ to $(\mathbb{N} \to \mathbb{N})$. Let n and m be natural numbers. Then

$$f(n)(m) = f(n)(m).$$

Result 3 (curried field application). [Postfix application, curried field]
Let p be an element of FunctionBox. Let n and m be natural numbers. Then

$$p.\mathrm{action}(n)(m) = p.\mathrm{action}(n)(m).$$

Result 4 (applied identity function). [Postfix application, applied lambda]
Let n be a natural number. Then

$$(x \mapsto x)\,(n) = n.$$

Result 5 (interleaved returned field). [Postfix application, returned record field]
Let n, m, x and y be natural numbers. Then

$$B_n(m).\mathrm{action}(x)(y) = n + m + x + y.$$

LLM-assisted examples (gpt-6, 2026-11-07). See PROVENANCE.md. Successive argument lists apply the function returned by the preceding expression.
