Result 1 (arbitrary equality). [Sequential scope, equality reflexivity]
Let T be an element of Type. Let x be an element of T. Then

$$x = x.$$

Result 2 (absolute value nonnegative). [Sequential scope, Mathlib abs_nonneg]
Let x be an element of $\mathbb{R}$. Then

$$|x| \geq 0.$$

LLM-assisted statements and proofs (gpt-6, 2026-11-07). See PROVENANCE.md. The first statement retains its local carrier despite a later global type of the same name.
